### Telephone Interview Summary

Applicants thank the Examiner for his time and courtesies extended during a telephone interview with the undersigned on 04 January 2008. The undersigned argued that applying the control system for the single computer of the Brodie et al. Patent to the rack of the Chu et al. Patent would result in multiple sensors, i.e., one per unit of Chu et al., which is not Applicants' claimed invention. The undersigned also inquired whether reciting the cooling system being in the cabinet would overcome the rejection. No agreement was reached.

Respectfully submitted,

Mark D. Swanson  
Regis. No. 48,498
